

## Xone:DB4 - FX Overview & Demonstration

This ZIP file contains the loops that Mark EG used whilst presenting the Xone:DB4 - FX Overview & Demonstration Videos.

Please use these loops and experiment with the FX on the Xone:DB mixers.

You should be able to follow Mark's overviews and replicate the sounds from the FX and see how they can be implemented on your style of music.

Whilst Mark used the Xone:DB4 mixer, most of the principles Mark demonstrates here with the Xone:DB4 also apply to the Xone:DB2.

### About the Xone:DB Series FX

There are 5 FX types (or groups). Each FX type contains many different FX variants.

Types are:

- DLY (Delays)
- VRB (Reverbs)
- RES (Resonators)
- MOD (Modulators)
- DMG (Damage)

For further detailed information on the FX, please visit <http://www.xone.co.uk/db4> or <http://www.xone.co.uk/db2> and download the FX Notes.

Visit our Sound Cloud <http://soundcloud.com/allenandheathxone> to hear Xone:DB FX mixes from DJs spanning many genres.
